

EXPLORATORY DATA ANALYSIS REPORT:

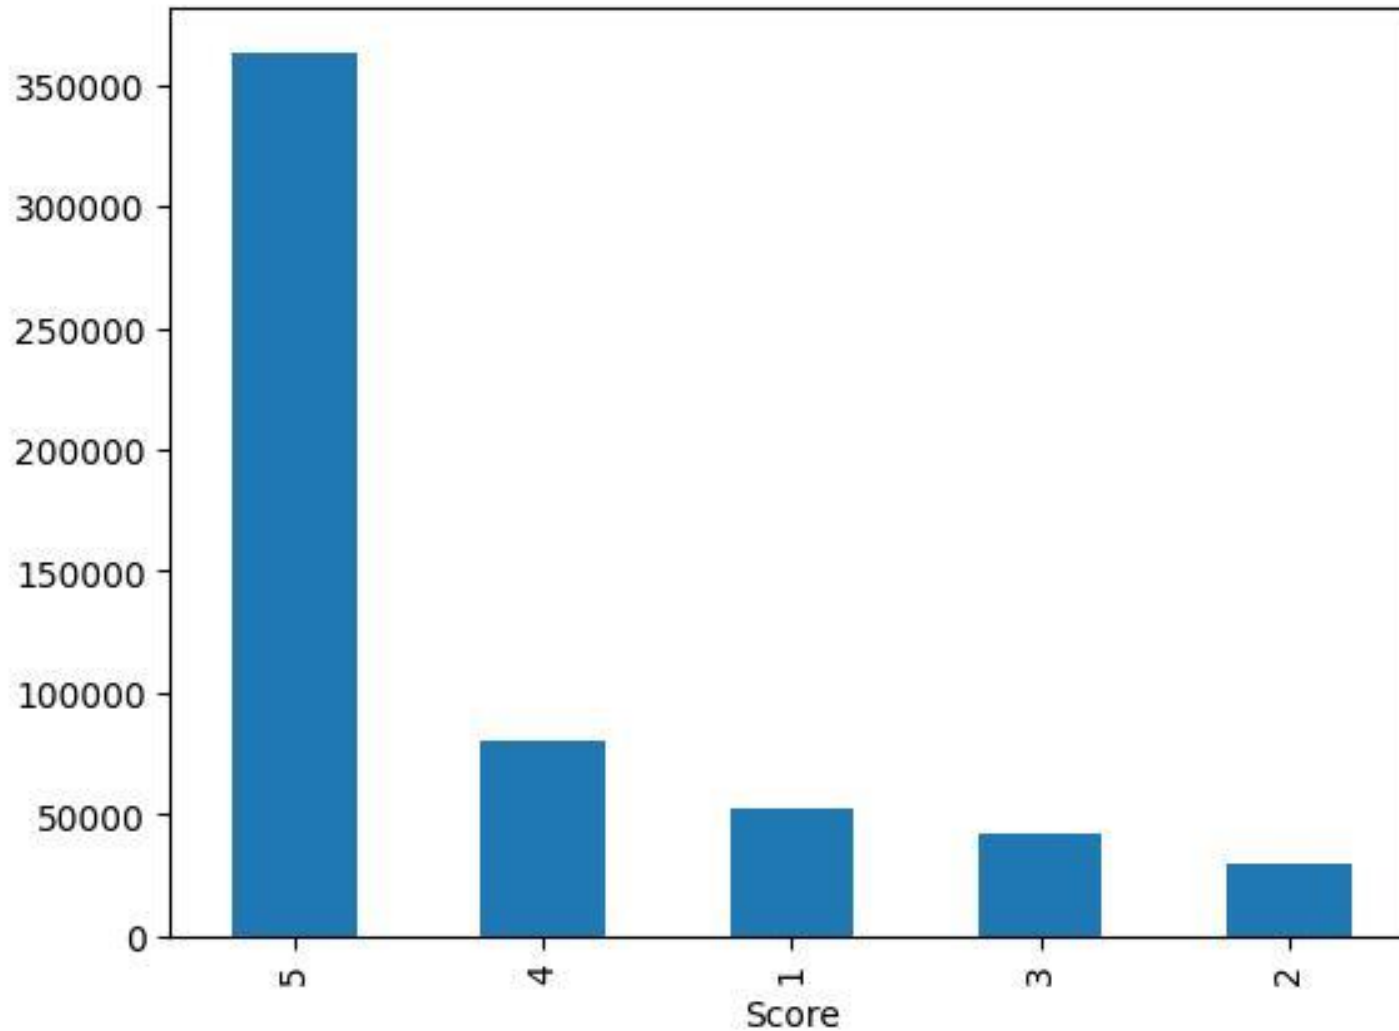

AMAZON FINE FOOD REVIEWS

Laura Jepson
MSDA 683

Data Sources and Main Characteristics

- Reviews from Oct 1999 - Oct 2012.
- 568,454 reviews of 74,258 products.
- From 256,059 users, 260 users with > 50 reviews.
- Dataset file size: 300.9 MB, .CSV format.
- 10 columns in dataset: Id, ProductId, UserId, ProfileName, HelpfulnessNumerator, HelpfulnessDenominator, Score, Time, Summary, Text.
- 568,454 total records (rows): 26 missing values in ProfileName, 27 missing values in Summary.

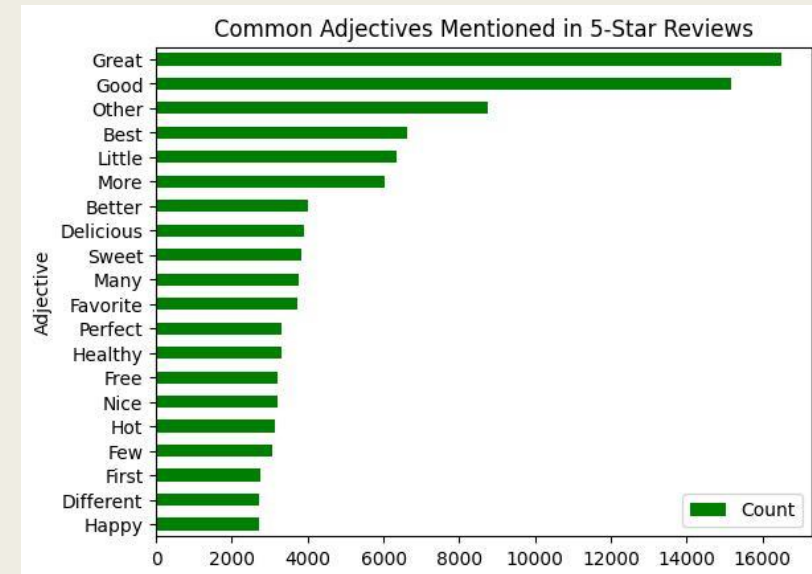

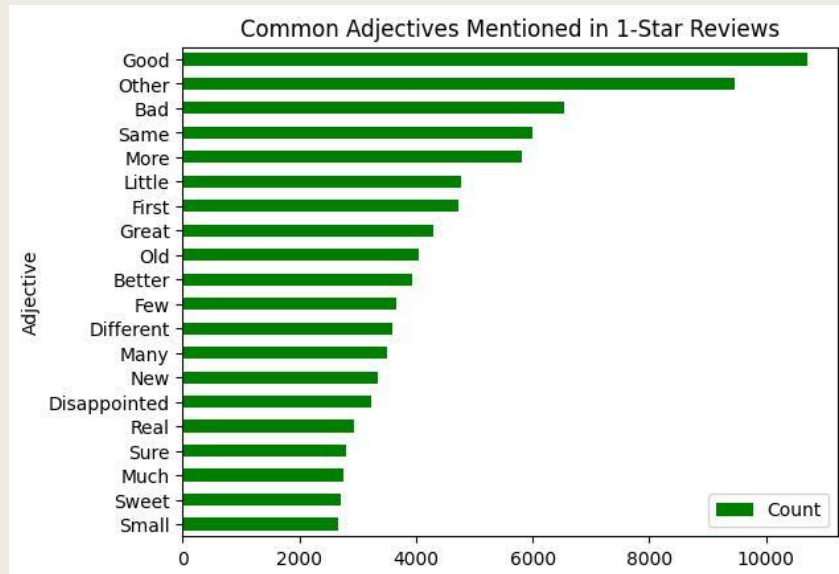

Basic Quantitative Value

The overall distribution of this data shows that, contrary to popular belief, more people leave 5-star reviews than 1-star reviews. This gives us valuable insight into where we will focus to improve your customer retention and brand loyalty. Lower scores will need to be more closely monitored for areas of improvement.

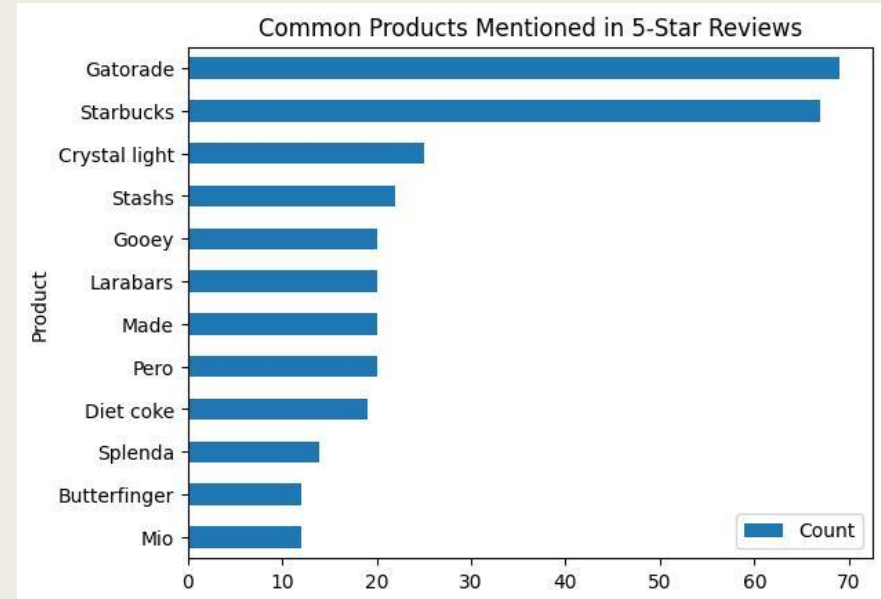

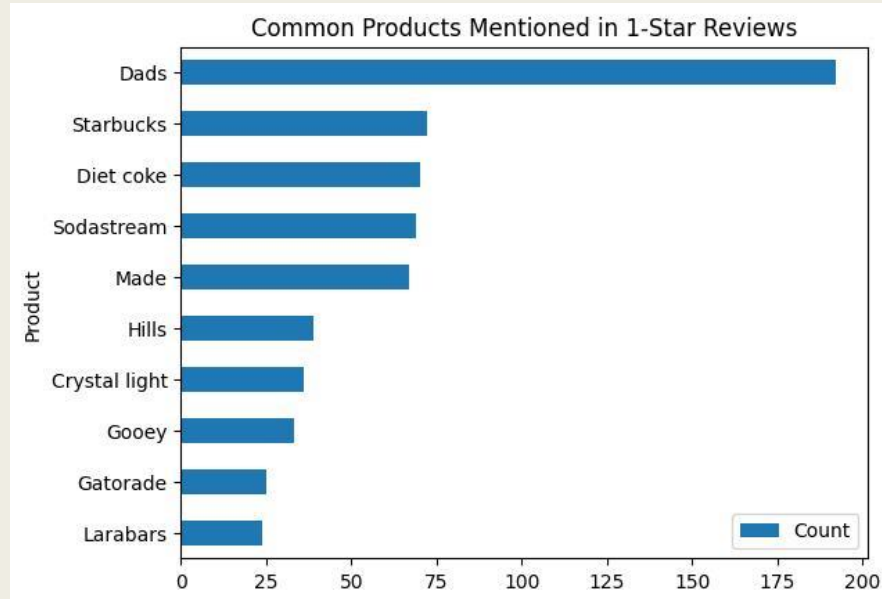

Basic Qualitative Value

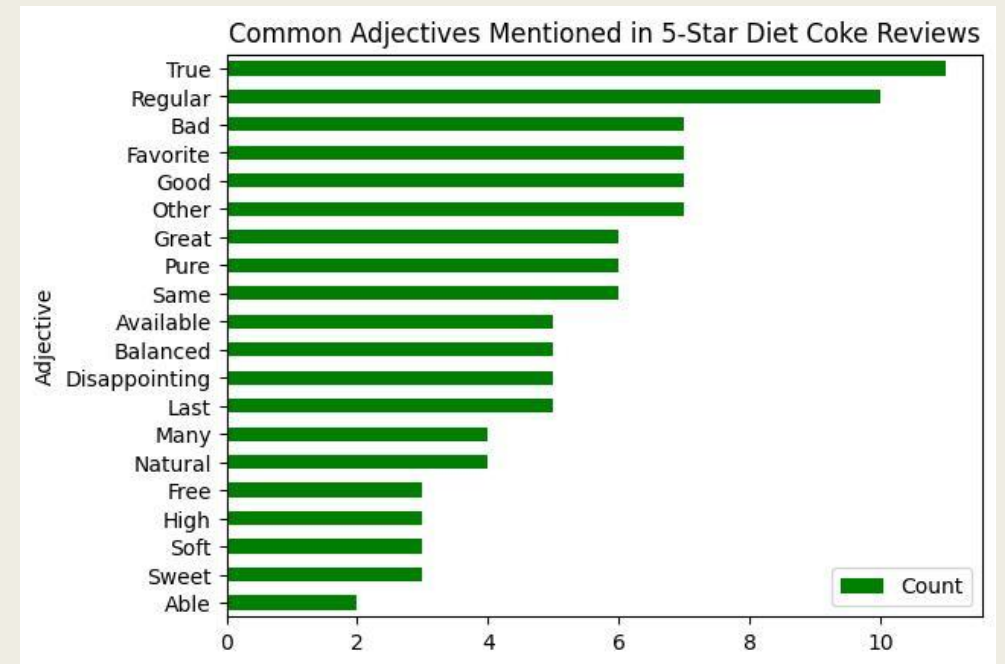

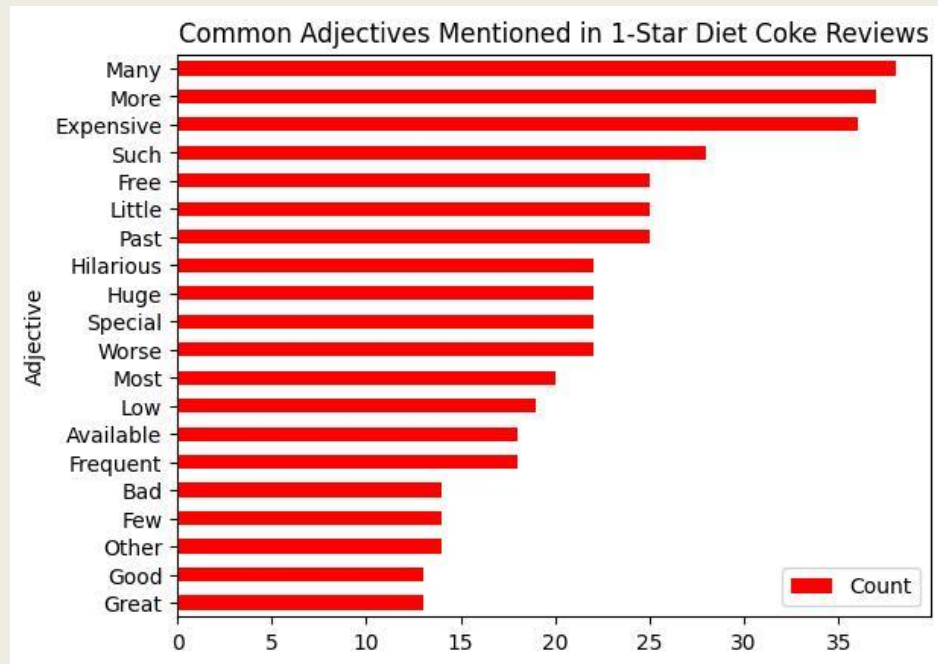

Our basic qualitative values across all reviews indicates that consumers are using a lot of comparison adjectives in their reviews. This translates to consumers having more choices for the same product now when making purchases. Companies will need to harness this data to have an edge on an ever-growing competitive market.

Common Products across 5-star and 1-star reviews

During the analysis of common products, our analytics team determined that Diet Coke ranked in the top 10 mentioned products for both 1-star reviews and 5-star reviews.

Upon further research we determined that many of the 1-star reviews mentioned quantity and price-predictability adjectives. Whereas many of the 5-star reviews mentioned a lot of adjectives related to taste-consistency. Diet Coke can increase customer satisfaction by providing more consistent pricing and product availability. Diet Coke will be able to improve brand loyalty by continuing to provide consumers with a consistent and reliable product.
